SUMMARY

Full-stack Developer with frontend expertise, 3 years building production SaaS at startups (since 2023). Ships React and TypeScript UIs and owns Go services end-to-end with PostgreSQL, gRPC, and Kubernetes. Comfortable owning product and UX without Figma, working directly with founders and CTO to ship from zero.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Go, Node.js, HTML5, CSS3, SQL, C++

Frontend: React.js (18 and 19), Next.js 15, Vue.js, Tailwind CSS, Ant Design v5, Styled Components, Material UI

State and Data: Redux, Zustand, React Query (TanStack), Axios

Specialized UI: React Flow, CodeMirror 6, TipTap, Quill, Xterm.js, Mermaid, Three.js

Real-time: MQTT, WebSockets, LiveKit

Desktop: Tauri 2 (Rust shell), Electron-class native applications

Backend: Go, GORM, gRPC, REST APIs, PostgreSQL, Atlas migrations, Dependency Injection (uber-go/dig)

Auth and Security: OIDC (OpenID Connect), OAuth 2.0, JWT, RBAC, ABAC, Session management

Infrastructure and DevOps: Docker, Kubernetes, Helm, Bazel, Microservices, Service-oriented architecture

Frontend Tooling: pnpm, Turborepo, Changesets, tsup, Vite, Webpack, ESLint, Sentry

Other: Git, Chrome Extensions (MV3), Monorepo architecture, Performance optimization, Cross-browser debugging

EXPERIENCE

SuperAGI

Bangalore, India

SDE-2, Full-stack

January 2025 to Present

- Built SuperAGI Chat Desktop with Tauri 2, React 18, and TypeScript — a native cross-platform app (macOS, Windows, Linux/Ubuntu) combining mention-based agent invocation (TipTap), MQTT real-time chat, and LiveKit voice and video meetings in one surface.
- Embedded an in-house Coder Agent providing an agentic-coding workflow comparable to Cursor, Claude Code, and Codex: Plan/Ask/Edit modes, embedded terminal (Xterm.js with tauri-pty), code-diff side drawer, per-tool permissions, parallel multi-agent threads with isolated context, and one-click pull request creation.
- Architected Agent Builder, a node-based DAG workflow automation engine, from scratch with React Flow, React 19, and Next.js 15 — extensible node types (triggers, branches, webhooks, agent actions), connector-pattern integrations, and a schema-cached metadata model letting users compose dozens of nodes in minutes with every node fully reusable.
- Created a fully metadata-driven CRM from the ground up (View Service and CRM Service) with zero hardcoded UI — custom objects supporting 20 to 25 attribute types, with every form, table, and detail view generated dynamically from the schema.
- Engineered a reusable data-table component powering any entity in SuperSales and CRM, with drag-to-reorder/hide/resize columns, row-grouping, Kanban view, advanced multi-condition filters, and a library of

reusable row and bulk action components (add-to-sequence, add-to-list, bulk edit/export/assign, quick-call, quick-email).

- Designed the Layout Service (frontend and backend) as a schema-driven rendering engine consumed by multiple internal services beyond CRM — any service can declare its layout in metadata and get fully rendered forms, tables, and detail views for free.
- Architected the Auth-v2 backend in Go (GORM with PostgreSQL, gRPC and REST handlers, deployed via Helm on Kubernetes) with OIDC for federated identity, plus the frontend RBAC and ABAC layer gating routes, components, and actions based on user roles and contextual attributes.
- Bootstrapped the entire superagi-ui monorepo from scratch — pnpm and Turborepo workspace, Changesets-driven semver releases, shared ESLint and TypeScript configurations, hosting more than 15 reusable connector packages now actively contributed to and consumed by engineers across multiple teams. Cut feature delivery time by 40 percent.
- Shipped end-to-end products and features including Invoice Service (frontend and backend), E-Signature Service, SuperSales sequence management, multi-channel outreach (Slack, Email, LinkedIn), domain and mailbox provisioning, and a Salesforce Chrome Extension (Manifest V3). Migrated critical workflows from Vue.js to React for 35 percent rendering performance improvement.
- Owned product and UI/UX design end-to-end on most modules — delivered polished, intuitive interfaces without Figma handoffs, working directly with the Founder and CTO on scope, flows, and visual design.

WE-Matter (Fortune Super 30)

Mumbai, India

SDE-1

September 2023 to January 2025

- Launched a comprehensive survey platform supporting 4 distinct user roles (admin, client, superadmin, user) and managing more than 200 active surveys.
- Deployed an automated reminder system processing more than 5,000 notifications per day across Gmail, WhatsApp, and SMS with a 95 percent delivery rate.
- Developed a data-rich analytics dashboard with Redux serving more than 500 concurrent users with real-time response tracking.
- Generated PDF reports with embedded charts, processing more than 1,000 exports per month using EJS templating.
- Leveraged Styled Components, Ant Design, and React Query to deliver responsive interfaces and improved load times by 45 percent.

EDUCATION

Lovely Professional University

Phagwara, India

Bachelor of Technology

August 2020 to July 2023

CGPA: 8.65

CERTIFICATIONS

The Web Developer Bootcamp, Udemy (November 2022)

C++ Programming, Udemy (May 2022)
